## Clinical & Interpretive

### Clinical Information

The Fungitell Beta  $\alpha$ -D Glucan assay detects (1,3)  $\alpha$ -D Beta-D-glucan from the following pathogens: Candida spp., Acremonium, Aspergillus spp., Coccidioides immitis, Fusarium spp., Histoplasma capsulatum, Trichosporon spp., Sporothrix schenckii, Saccharomyces cerevisiae, and Pneumocystis jiroveci.

The Fungitell Beta-D Glucan assay does not detect certain fungal species such as the genus *Cryptococcus*, which produces very low levels of (1,3)  $\beta$ -D-glucan, nor the Zygomycetes, such as *Absidia*, *Mucor*, and *Rhizopus*, which are not known to produce (1,3)  $\beta$ -D-glucan. Studies indicate *Blastomyces dermatitidis* is usually not detected due to little (1,3)  $\beta$ -D-glucan produced in the yeast phase.

**Reference Values**

A reference range for specimens other than serum has not been established.

**Interpretation**

The performance characteristics of the Fungitell assay in bronchial wash have been determined by Viracor-IBT Laboratories; there are no established criteria for the interpretation of Fungitell results from bronchial wash fluid. Research studies have evaluated the use of the Fungitell assay in BAL in both immunocompromised patients (*Mycopathologia* (2013) 175:33-41) and acute eosinophilic pneumonia (*Chest* (2013) 123:1302-1307).
