

Test Definition: APOAB

Apolipoprotein A1 and B, Serum

Overview

Useful For

Assessment of cardiovascular risk

Follow-up studies in individuals with basic lipid measures inconsistent with risk factors or clinical presentation

Definitive studies of cardiac risk factors in individuals with significant family histories of coronary artery disease or other increased risk factors

Profile Information

| Test Id | Reporting Name | Available Separately | Always Performed |
|---------|---------------------------|----------------------|------------------|
| RBAA1 | Apolipoprotein B/A1 ratio | No | Yes |
| APOA1 | Apolipoprotein A1, S | Yes | Yes |
| APOLB | Apolipoprotein B, S | Yes | Yes |

Method Name

APOA1, APOLB: Automated Turbidimetric Immunoassay

RBAA1: Calculation

NY State Available

Yes

Specimen

Specimen Type

Serum

Specimen Required

Supplies: Sarstedt Aliquot Tube, 5 mL (T914)

Collection Container/Tube:

Preferred: Serum gel

Acceptable: Red top

Submission Container/Tube: Plastic vial

Specimen Volume: 1 mL serum

Collection Instructions: Centrifuge and aliquot serum into a plastic vial.

Forms

If not ordering electronically, complete, print, and send a [Cardiovascular Test Request Form](#) (T724) with the specimen.

Specimen Minimum Volume

0.5 mL serum

Reject Due To

| | |
|-----------------|--------|
| Gross hemolysis | Reject |
| Gross lipemia | OK |
| Gross icterus | Reject |

Specimen Stability Information

| Specimen Type | Temperature | Time | Special Container |
|---------------|--------------------------|----------|-------------------|
| Serum | Refrigerated (preferred) | 8 days | |
| | Ambient | 24 hours | |
| | Frozen | 60 days | |

Clinical & Interpretive

Clinical Information

Apolipoprotein B (ApoB) is the primary protein component of low-density lipoprotein (LDL). Apolipoprotein A1 (ApoA1) is the primary protein component of high-density lipoprotein (HDL). Elevated ApoB and decreased ApoA1 are associated with increased risk of cardiovascular disease. Multiple studies have reported that ApoB and ApoA1 are more strongly associated with cardiovascular disease than the corresponding lipoprotein cholesterol fraction (see APOA1 / Apolipoprotein A1, Serum and APOLB / Apolipoprotein B, Serum).

Apolipoprotein B is present in all atherogenic lipoproteins including LDL, Lp(a), intermediate-density lipoprotein, and very low-density lipoprotein remnants. ApoA1 is the nucleating protein around which HDL forms during reverse cholesterol transport. The ApoB:ApoA1 ratio represents the balance between atherogenic and antiatherogenic lipoproteins. Several large prospective studies have shown that the ApoB:ApoA1 ratio performs as well, and often better, than traditional lipids as an indicator of risk.(1-3)

Reference Values

Males

| Age | Apolipoprotein A (mg/dL) | Apolipoprotein B (mg/dL) | Apolipoprotein B/A1 ratio |
|----------------|--|--|--|
| <24 months | Not established | Not established | Not established |
| 2-17 years | Low: <115 Borderline low: 115-120 Acceptable: >120 | Acceptable: <90 Borderline high: 90-109 High: > or =110 | <0.8 |
| > or =18 years | > or =120 | Desirable: <90 Above Desirable: 90-99 Borderline high: 100-119 | Lower Risk: <0.7 Average Risk: 0.7-0.9 Higher Risk: >0.9 |

| | | | |
|--|--|---------------------------------------|--|
| | | High: 120-139 Very high: > or =140 | |
|--|--|---------------------------------------|--|

Females

| Age | Apolipoprotein A (mg/dL) | Apolipoprotein B (mg/dL) | Apolipoprotein B/A1 ratio |
|----------------|--|---|--|
| <24 months | Not established | Not established | Not established |
| 2-17 years | Low: <115 Borderline low: 115-120 Acceptable: >120 | Acceptable: <90 Borderline high: 90-109 High: > or =110 | <0.8 |
| > or =18 years | > or =140 | Desirable: <90 Above Desirable: 90-99 Borderline high: 100-119 High: 120-139 Very high: > or =140 | Lower Risk: <0.6 Average Risk: 0.6-0.8 Higher Risk: >0.8 |

Interpretation

Elevated apolipoprotein B (ApoB) confers increased risk of atherosclerotic cardiovascular disease, even in a context of acceptable low-density lipoprotein (LDL) cholesterol concentrations.

ApoB values less than 48 mg/dL are considered very low (<2.5th population percentile). Possible causes include aggressive lipid-lowering therapy, malnutrition, hepatobiliary disease, or drug interactions. Decreased ApoB may indicate hypobetalipoproteinemia (HBL). Genetic testing for HBL is available (HYPBG / Hypobetalipoproteinemia Gene Panel, Varies).

Reduced apolipoprotein A1 (ApoA1) confers an increased risk of coronary artery disease. Extremely low ApoA1 (<20 mg/dL) is suggestive of liver disease or a genetic disorder.

Elevated ApoB:ApoA1 ratio confers increased risk of atherosclerotic cardiovascular disease, independently of LDL and high-density lipoprotein cholesterol concentrations.

Cautions

In very rare cases, gammopathy, in particular type IgM (Waldenstrom macroglobulinemia), may cause unreliable results.

Performance

Method Description

Antiapolipoprotein B antibodies react with the antigen in the sample to form antigen:antibody complexes which, following agglutination, can be measured turbidimetrically.(Package Insert: Tina-quant Apolipoprotein B, Roche Diagnostics. V13.0 03/2022)

Antiapolipoprotein A-1 antibodies react with the antigen in the sample to form antigen:antibody complexes which, following agglutination, can be measured turbidimetrically.(Package Insert: Tina-quant Apolipoprotein A-1, Roche Diagnostics. V12.0 02/2022)

PDF Report

No

Day(s) Performed

Monday through Sunday

Report Available

1 to 3 days

Specimen Retention Time

1 week

Performing Laboratory Location

Mayo Clinic Laboratories - Rochester Main Campus

Fees & Codes

Fees

- Authorized users can sign in to [Test Prices](#) for detailed fee information.
- Clients without access to Test Prices can contact [Customer Service](#) 24 hours a day, seven days a week.
- Prospective clients should contact their account representative. For assistance, contact [Customer Service](#).

Test Classification

This test has been cleared, approved, or is exempt by the US Food and Drug Administration and is used per manufacturer's instructions. Performance characteristics were verified by Mayo Clinic in a manner consistent with CLIA

requirements.
